T79066
   amino acids shorter than those described in the prior art. This segience is a short form of the nowel computer MEI(TAN 4.5) howen as Mel 1-o(beta). As compared to the short form (T740-K), the difference occurs in the 3 untranslated region (both separate the same protein), which is thought to affect the half-life of the mana. The MEI(TAN 5-separate separate styles) with the separate separate styles are from Xenopus skin kna and amplified using the primers I79367-75. The nucleotide sequence was isolated from modulate receipts as protein which is a 7 transmembrane receipts involved in cellular signalling. MEI(TAN has been shown to modulate interacellular signalling. MEI(TAN has been shown to modulate interacellular source as interacellular states.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Allele, Newpys laevis, melatodin, receptor untranslated region: PCR: mRNA; half-life; skin; amplification; primer; polymerase chain reaction; transmembrane domain, cellular signalling, inhibition; adenylyl cyclase; modulation; intracellular; cyclic GMP; inhibitor; phosphodiesterase, ss.
Sequence 1147
                                 intracellular cGMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodiastarasa, but uplika MEI (1Ap (T79063) cannot inhibit adenylyl cyclase activity.
                                                                                                                                                                                                                                                                      Sequences T79063-66 represent novel allelic genes of the Xenopus laevis melatonin receptor MEI-lA. The sequences encode proteins which are 65

untranslated region (both sequences encode the same protein), which is thought to affect the half-life of the mRNA. The MEL-lab sequences also differ from known MEL-la receptor sequences by 6 amino acids. The nucleotide sequence was isolated from cNNA derived from Xenopus skin RNA and amplified using the primers T79067-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-lab has been shown to modulate intracellular CGMP, esp. inhibiting its accumulation induced by an inhibitor of phosphodiesterase, but unlike MEL-laa (T79063) cannot inhibit adenylyl

                                                                                                                                                                                                                                                                                                                                                                                     melatonin receptor MEL-1A. The sequences encode proteins which are 65 amino acids shorter than those described in the prior art. This sequence is a long form of the novel receptor MEL-1Ab also known as Mel 1-c(beta). As compared to the short form (T79066), the difference occurs in the 3'

The sequences encode protoins which are 65 amino acids shorter than those described in the prior art. Also the last 2 Titurminal prior artist encoded by those sequence is a short form of the novel the previously known proteins. This sequence is a short form of the novel receptor MEL-IAu also known proteins. The sequence is a short form of the blood form (T79063), the difference occurs in the 3' untranslated region (both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   sequences enough the same protein), which is thought to affect the half-life of the mRNA. The nucleotide sequence was isolated from cDNA derived from senopus skin RNA and amplified using the primers 179057-76. The nucleotide sequence encodes a protein which is a 7 transmembrane receptor involved in cellular signalling. MEL-laa has been shown to inhibit adenylyl cyclase, but both proteins can modulate intracellular each each each inhibitor of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cardiovascular disease and cancer

Rew nucleic acid enoughly functional modatomic receptor of Nemopus Proceeding for potential (ant)agonists useful for e.g. treating Proceding for potential (ant)agonists useful for e.g. treating Proceding for potential (ant)agonists useful for e.g. treating Proceding Sciences and cancer

XX

XX New nucleic acid enoughly functional modatomic receptor of the Xemopus laevis Control of the sequences of the Xemopus laevis Science acids shorter than the sequences enough proteins which are 65 control of the India and India acids shorter than the sequence is a long form of the novel of the previously known proteins. This sequence is a long form of the novel receptor MEL-laa also known as Mel 1 (alpha). As compared to the short of form (179064), the difference occurs in the 3 unitranslated from Conformation which is thought to affect the sequences enough to sequence was isolated from CON allf-life of the mRNA. The nucleoting which is thought to affect the CONFORMATION of the modes a protein which is a 7 transmembrane of receptor involved in cellular signalling. MEL-laa has been shown to the septiment of the involved in cellular signalling. MEL-laa has been shown to the sequence encodes a protein which is a 7 transmembrane of the sequence of inhibiting its accumulation induced by an inhibitor of the phosphodiesterase.

Receptor framments which interact with melatonin, or specific antibodies may be used as receptor-agonists or receptor-antagonists. Agonists may be used in therapy of circulatan rhythm disorders such as jet-lad or day-night cycle disorders, to control evulation, or in alteration of refriductive cycles is seas-nelly breaking animals. Antagonists may be used to control the initiation or timing of puberty in humans. The receptor gene may also be expressed in a transpenic animal for use as a model system to screen agonists and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             from Xenopus dermal melanophores, and expressed in Escherichia coli Flanking TNA sequences of the 1st 2 Met colons to hild leplay a Kozak consensus sequence for initiation of translation. The Xenopus sequence has been used for isolation of homologous sheep, mouse and homologous sheep.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          laevis. The receptor is a membrane protein, coupled to quanino perleutide kinding proteins (O-proteins). The cDNA has been cloned
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 5, Fig 1; 115pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; alpha-1C adrenergic receptor; tissue specific receptor expression; reverse transcriptase polymerse chain reaction; RT-PCR; heart mRNA; transmembrane region; primer; open reading frame; bowlne, hippocampus, alpha-1C receptor; library; mammallan cell line; ligand; truncation; function; signal transduction signal; benign prostatic hyportrophy; finasteride; intraocular pressure, arrhythmia, CNS, prostatic cancer, male pattern baldness; seborrhoea; female hirsutiam; prostatitis; acne: porassium channel opener; minoxidil; G-protein, ligand binding site; ds.
             The sequences given in 072222.23 are primers which were used to amplify this partial cDNA for the human alpha-IB adrenergic receptor. The sequences given in 072225.26 are primers which were used to amplify the 3' end of the rat alpha-IB adrenergic receptor (see also 072227). The amplified human sequence was ligated to the 3' end of the rat sequence to give the sequence within 10 807879. The complete coding roution for the human/rat alpha-IB adrenergic receptor was subcloned into the eukaryotic expression vector pc0NAI-neo. The resulting plasmid was transfected into COS-7 cells by electroporation. Membranes prepared

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        bind to the receptor and alter its function. Truncation at the 3, and of the sequence does not affect the functioning of the receptor, as long as the ligand binding domain and signal transduction segments of the receptor (G-protein interaction) are intact. Cells expressing the 1C receptor are used to identify compounds which bind to this receptor with at least a 12 fold greater affinity than to other adrenergic receptors. Compounds identified this way, are useful for treating the acute symptoms of benign prostatic hypertrophy, particularly when used in conjunction with finasteride. They may also be used to reduce intracular pressure, control arrhythmia and other CNS events related to the 1C receptors, to treat or prevent male pattern baldness, seborihoea, female hirsuitism, prostaticis, prostatic cancer and acne. For treating baldness they may be formulated with a potassium channel opener such as minoxidil. The cloned receptors can be used to screen for tissue specific receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               from the COS 7 cells transfected with the vactor containing the alpha-18 receptor gene specifically bound the alpha-1 antagonist [1251]-HEAT. Transformed membranes such as these may be used to discover ligands that

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CLASSIFICATION: 514

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             08/229,276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ms, 100, 1722, 1001
